DETAILED ACTION

This Office Action is responsive to the Amendment filed on July 5, 2007. The Applicant has amended claims 52 and 121; canceled claims 114, 115, 122. However, a new rejection is presented for the following reasons of record.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 52, 116-121, 123-127 are rejected under 35 U.S.C. 102(b) as being anticipated by Koch, DE 4004220 C1.

Rejection of claims 52, 116-121, 123-127 drawn to an anode.

Koch teaches an anode that is a chemically rechargeable anode, wherein at least a portion of the anode is liquid at a temperature at which the anode is operated (abstract). The anode of claim 52, wherein the anode is operable at a temperature of less than about 1500 °C (p. 5, paragraph 1). The anode of claim 52, wherein the anode is operable at a temperature of less than about 1300 °C (p. 5, paragraph 1). The anode of claim 52, wherein the anode is operable at a temperature of less than about 1000 °C (p. 5, paragraph 1). The anode of claim 52, wherein the anode is operable at a temperature from about 300 °C to about 1500 °C (p. 5, paragraph 1). The anode of claim 52, wherein the anode is operable at a temperature from about 300 °C to about

1300 °C (p. 5, paragraph 1). An anode being constructed of a material such that the anode is a chemically rechargeable anode comprising tin metal (p. 5, paragraph 1). The anode of claim 121, wherein the anode is operable at a temperature of less than about 1500 °C (p. 5, paragraph 1). The anode of claim 121, wherein the anode is operable at a temperature of less than about 1300 °C (p. 5, paragraph 1). The anode of claim 121, wherein the anode is operable at a temperature of less than about 1000 °C (p. 5, paragraph 1). The anode of claim 121, wherein the anode is operable at a temperature from about 300 °C to about 1500 °C. (p. 5, paragraph 1) The anode of claim 121, wherein the anode is operable at a temperature from about 300 °C to about 1300 °C (p. 5, paragraph 1).

Thus, the claims are anticipated.
